Some closing remarks

Norman McCubbin

Some closing remarks

- An interesting (if exhausting) week
- ATF and further work:
  - very valuable to have input and comments (yes..really!)
  - `Architecture team' (AT): (my) idea is small number of people but with **large amount** of interaction with all interested parties. It is very probable that AT would `sub-contract' work to other people.

Some closing remarks

- Sorting out precise composition of this team is not completely straightforward, for all sorts of (legitimate) reasons!
- Overall, I am encouraged (but not complacent) about ‘sense of progress’: moving toward PTDR `release’, engagement from `sub-systems’, PASO, detector description work, G4,…….

Some closing remarks

- The PLAN: we will need to make substantial progress on this by next s/ware week, because **ATLAS needs it**, and all the various reviews will demand it.
- From FOCUS yesterday:
  - LINUX is **the** platform (RHat 6.1 on Intel for 2000), but need for `LINUX+1' is recognised.
  - IT is being reorganised (...again...). See del Fino talk at FOCUS yesterday (when available).

Some closing remarks

- For next s/ware week:
  - this week's agenda very crowded!
  - Next time (Feb 14-18) should we consider fewer meetings and more `work-shop'??

- Seasonal greetings…and see you all post-Y2K!
