REVISED Atlas reaction to CERN RISC-proposal

- Revised ATLAS reaction to CERN RISC-proposal:
  - there is clear recognition of trend to PC and Linux;
  - Linux **alone** is not a good idea, for a variety of reasons, and we need a second distinct platform on which software can be installed and tested (implies WGS or similar);
  - SUN Solaris is the strongly preferred second platform;
  - Given LINUX+Sun, the rest of the CERN (Robertson) proposal is broadly acceptable for the off-line software;
  - The ATLAS test-beam community foresees use of HP (+RD13 s/ware) lasting into 2002, but OS version 10.20 is OK.
