Main Features

- Any web browser: Edit existing pages or create new pages by using any web browser.
- Webs: Pages are grouped into TWiki webs (or workspaces). Go to the appropriate web.
- Edit link: To edit a page, simply click on the [Edit] link at the top or bottom of the page.
- Auto links: Web pages are linked automatically. You do not need to learn HTML commands.
- Text formatting: Simple, powerful and easy-to-learn text formatting rules.
- Search: Full text search with/without regular expressions. See a sample search result.
- E-mail notification: Get automatically notified when something has changed in a TWiki web.
- Classify and categorize web pages and create workflow applications.
- File attachments: Upload and download any file as an attachment to a page.
- Revision control: All changes to pages and attachments are tracked.
- Access control: Use egroups and impose fine-grained read and write access restrictions.
- Variables: Use variables to dynamically compose your pages.
- TWiki plugins: Enhancements using external plug-in modules.
- Templates and skins: A flexible templating system separates program logic and presentation.
- Managing pages: Individual pages can be renamed, moved and deleted through the browser.
- Preferences: Three levels of preferences: Site-level, Web level and User level.
- Simultaneous page editing: More than one person can edit a page at the same time.
- Backlinks: Find the pages that contain links to a topic.
