Dr. Pradeep K. Dubey will be delivering a computing seminar at CERN on Monday, October 5, on current Intel R&D activities on throughput computing

In the context of the CERN openlab collaboration, a group of Intel staff will be coming to CERN on Monday, October 5, to discuss common projects with the team.

At this occasion, Dr. Pradeep K. Dubey, Director of Throughput Computing at Intel Corporation, also offered to share more widely their current R&D activities on throughput computing applications and their compute platform implications, in the form of a computing seminar.

The lecture, Massive Data Computing in a Connected World, will start at 11AM in the IT Auditorium.

Further details about the event (and later on the slides) are available on the following website: <http://cern.ch/computing.seminars>
